Data Analyst/Scientist (Junior)

Job Title: Junior Data Analyst / Data Scientist

Responsibilities:

- Collect, clean, and preprocess structured and unstructured data from multiple sources.

- Analyze large datasets to discover patterns, trends, and actionable insights.

- Build and validate predictive models under supervision.

- Visualize data and present findings to stakeholders using charts, dashboards, and reports.

- Collaborate with engineering and product teams to define data requirements and deliver solutions.

- Document analysis processes and maintain data integrity.

Required Skills:

- Proficiency in data analysis tools (Python, R, SQL).

- Basic understanding of statistics, data mining, and machine learning concepts.

- Familiarity with data visualization tools (e.g., Tableau, Matplotlib, Power BI).

- Strong attention to detail and problem-solving skills.

- Good written and verbal communication.

Education:

- Bachelor's degree in Computer Science, Statistics, Mathematics, or a related field.

Experience:

- 0–2 years of experience in data analysis or related roles (internships or academic projects acceptable).
